

Preface

Polymer science or macromolecular science is a subfield of materials science concerned with polymers, primarily synthetic polymers such as plastics and elastomers. The field of polymer science includes researchers in multiple disciplines including chemistry, physics, and engineering.¹

In the present book, ten typical literatures about polymer science published on international authoritative journals were selected to introduce the worldwide newest progress, which contains reviews or original researches on polymer science. We hope this book can demonstrate advances in polymer science as well as give references to the researchers, students and other related people.
